Ukrainian

English

PROFILE

Experienced Backend Developer adept in all stages of advanced web development. I love learning new things and looking for a team to grow with as a developer. I have skills in working with other scripting languages and use them as auxiliary tools when necessary. I know how to work and configure CI/CD, worked with many Laravel products, popular libraries and APIs.

I really love Laravel and its ecosystem, so I prefer to work with this framework, but I'm ready to listen to any suggestions.
